Professional Summary

Ambitious and technically grounded AI Product Engineer specializing in building end-to-end intelligent systems, deep-context Retrieval-Augmented Generation (RAG) pipelines, and secure decentralized architectures. Proven ability to translate complex backend logic into functional web interfaces, combining rapid LLM orchestration with an entrepreneurial, product-focused mindset to drive startup ecosystem growth.

Technical Skills

AI & Data Engineering: Python, RAG Systems, ChromaDB, Semantic Embeddings, Groq API, Llama 3.3, Pandas, pypdf, ETL Pipelines, Streamlit, JSON/CSV

Blockchain & Web3: Solidity, EVM, Smart Contracts, Web3.py, Applied Cryptography (AES-256), Tokenization

Technical Projects & Architectures

Python, GenAI APIs, Pandas, pypdf

B2B AI Invoice Extractor (ETL Pipeline)

- Engineered an automated ETL pipeline using Multimodal LLMs to extract unstructured financial data from PDFs into strict machine-readable formats (JSON/CSV).
- Bypassed fragile legacy OCR templates, enabling dynamic entity extraction for seamless integration into accounting ERPs.

Python, Streamlit, Groq, NewsAPI, Llama 3.3

Autonomous News Briefing Agent ('ai-cli-app')

- Engineered an autonomous intelligence pipeline that securely aggregates live headline feeds via NewsAPI and runs hardware-accelerated text orchestration through Llama-3.3-70b inference.
- Successfully refactored a terminal-blocking script into a modular, production-ready web application running smoothly inside Google Chrome via local multi-threaded Streamlit servers.

pypdf, Pandas, ChromaDB, Vector Embeddings

PDF Knowledge Extraction & RAG Pipeline

- Developed a structured text processing pipeline using pypdf and Pandas to ingest, chunk, clean, and isolate raw document formatting from unformatted multi-page PDF files.
- Integrated semantic vector embeddings and managed database indices utilizing ChromaDB to establish core infrastructure for low-latency contextual data retrieval.

Django, Python pyaes, Solidity, Anvil/Hardhat Node

Secure Tender Management System ('rgtoken')

- Architected a hybrid Web3 procurement platform utilizing off-chain AES-256 encryption before EVM storage, solving the blockchain open-ledger privacy flaw for sealed B2B corporate bidding.
- Linked a local Django backend to Solidity smart contracts to enforce Role-Based Access Control (RBAC), ensuring immutable and tamper-proof auction execution.

Professional Experience

Edutainer (PAT Technologies Pvt Ltd)

Bengaluru, Karnataka

Entrepreneurship Intern

Feb 2026–May 2026

- Applied strategic product frameworks to evaluate early-stage venture requirements, effectively aligning technical product objectives with business sustainability metrics.
- Collaborated on cross-functional business initiatives under direct evaluation from the Founder & CEO to fulfill core program KPIs.

Future Intern Inc.

Bengaluru, Karnataka

Blockchain & Web3 Intern

Sep 2025–Oct 2025

- Deployed a custom ERC-20 token on the Polygon testnet leveraging OpenZeppelin standards for secure minting and supply management.

Education

Rajiv Gandhi Institute of Technology (VTU)

Bengaluru

Bachelor of Technology (B.Tech) in Computer Science

Exp. May 2026
